I am a father, a farmer and I am totally against these unconstitutional and unethical mandates you are all trying to enforce upon the people of Maine. What you should be doing is protecting the people of Maine by removing the 1986 act which protects vaccine companies from any liability if injury occurs from this mRNA GENE THERAPY. My grandmother died 10 days after her 2nd shot. My partners father had a stroke after his shot. There are risks with taking this Gene therapy therefore.. there must be a choice. To enforce it in this way is counter productive. It doesn't even stop the spread and neither do the masks. you need to encourage people to eat better, exercise, gardening, eating local. Health is very simple. The CDC director has admitted 75% of all covid deaths occurred in individuals with 4 or more other health complications. The truth is being buried. How covid was handled around the world is a crime against humanity. Please consider testing extensively before mandating unnecessary vaccines for children.
