The very notion of uniformed consent lends itself to outright fraud & negligence. Additionally, with the pharmaceutical companies held non-labile for ANY adverse reaction, injuries or death is totally incompatible with allowing parents to make informed decisions. In today's climate of "just do it" "get jabbed" screams of a flippancy & outright incompetence. Neither government officials or the pharmaceutical companies will be there when a child is injured or has reproductive problems or worse death. When a parent cites these issues they are ridiculed & dismissed. These are valid concerns! In the past vaccines were terminated with far fewer injuries or deaths, now they are totally ignored & dismissed. Threats of being barred from accessing daily life restaurants, theater, community involvement all of which is designed to great two separate classes of citizens. Let me remind you that YOU are nothing more than transient officials. Your job is to make opportunities & provide for economic opportunities. Being coerced into ANYTHING is not keeping with the principles on which this state or country was founded.
