

Written testimony in support of the Maine Psilocybin Services Act

Various publications, including recent systematic reviews have demonstrated the effectiveness of psychedelic assisted medical management for various conditions including depression, alcohol abuse, smoking cessation, obesity and post trauma stress disorders. Experts in this field expect that psychedelic assisted treatments for these and other conditions will become main stream in the near coming future. This gives Maine the potential opportunity to be a pioneer in this evolving region, helping our citizens and medical consumers with a new, exciting and effective intervention model.

Please accept this written testimony in support of the Maine Psilocybin Services Act.

Thank you,
Dr. Noel Squires DPT
