Please support LD 1551. In this day and age, we have thousands upon thousands of ingredients with a long history of safe usage and do not require animal testing. We have multiple ways to test new products as well, if needed, and the use of animals is both outdated and far behind other places in our continued use of it. Animals unnecessarily suffer in various horrific manners, being forced to eat substances and/or have substances pushed or poured into their eyes and/or on their bodies - and are then killed. This is completely outrageous - I am so proud to live in Maine, as it is known for its excellent laws protecting animals (we were number one in the Animal Legal Defense Fund in 2020). Let's keep that going and become an even greater place for animals this year. There are so many amazing companies that already don't test on animals - let's make that "all" in our wonderful state!
