Freeport

Opposed to LD114. It does nothing to reduce the noise pollution to reasonable levels. 90db is 10 times the intensity of sound of 80 db and is perceived as twice as loud. I am sorry the committee experience 90 or 100 db from the shore for 15 or 20 minutes because if they could, they would have no hesitation in opposing this proposal and approving LD 89. LD 89 is a compromise in itself. Thousands of residents are being exposed to sleep and life disruption by excessive and unnecessary noise. The harvesters can run airboats at lower speeds and keep working efficiently and respect their neighbors. Thank You.
