Dear Committee Members, Thank you for your interest in this public health matter regarding excessive noise pollution on upper Casco Bay shoreline communities. The proposed 90db daytime and 75db nighttime limit is far too loud for the health of the inhabitants and wildlife around the Bay. We have experienced this noise in our house so loud you cannot have a conversation or concentrate on your work. Airboat propeller noise is prolonged and disruptive. We have seen that they can operate at lower noise levels in the testing done. The limit of noise should be the same for conventional boats as well as airboats.  
Thank you for listening.
