Stable coyotes on a farm become guardian coyotes. A stable family of coyotes will not allow any other coyotes on their territory .

The coyotes and the farmer establish a relationship of trust with each other .

The presence of stable families of coyotes on Maine farms, protect Hooved animals on the farm from the brain worm carried by deer. With coyotes present deer do not just stand around in pastures all night. when this bill gets passed this will not only give coyotes refuge from human behaviors while bringing up their pups , but it will also help farmers who rely on coyotes to keep their farms ecosystems healthy and balanced. They do this by controlling the behaviors of herbivores that can cause damage and spread disease. Maine farmers feed us. We want them to be successful.

LD 716 – an act to restrict the hunting of coyotes from April 1 to September 30 pup season! thank you in advance for doing the right thing and passing this bill.

Sincerely,

Sasha Tyburski Bremen, Maine
