Oversight is important for the health of our oceans and all waterways, vernal streams and aquifers. I'm concerned that we undervalue our national resources, including Maine's. I don't support the CMP corridor, and I'm concerned that too often we accept industries' storyline. I hope this bill will provide oversight and consider the link between our land and water. Right now there are several proposals in main committees to reduce responsibility for oversight during this emergency covid pandemic. In fact many agencies had changed practices and lagging oversight last year . I'd rather codify regulation than making reduced transparency and regulation a new Norm.
