I am a land surveyor. I not only survey property boundaries but assist in land development thru the preparation of subdivision & site plans. At least weekly, if not daily, I access geospatial data acquired by the state as part of my work.

I also serve on my local planning board. I frequently access State geospatial data when projects are proposed to us.

The data collected by the State is of great benefit to me, my clients, and municipalities.

A continuous & stable funding plan is a great benefit to all.
