Citizens deserve the right to choose what they think is best to heat their homes. If you want to push/incentivize electric heating... the grid needs to be updated to accommodate FIRST!!! Also, no taxpayer money should be spent on unproven energy methods. Build a nuclear power plant...build something useful. Put it to vote. It's clear our power grid does not have the capacity to deliver the electricity needed to turn our northern state renewable... yet. The technology simply isn't there. Don't put the cart before the horse. Do this WISELY. Update the grid FIRST!
