Portland
LD 1020

I am writing in support of LD 1020 because I think the Gorham Connector would be horribly disruptive and extremely expensive to build and will not actually solve the traffic congestion it means to address.

There are hundreds of studies of projects all over the country proving that adding new lanes of traffic does not reduce traffic congestion. Let's not pursue a strategy that has been proven so wrong over and over again all over the country.

Please do not waste this huge amount of money! Instead let's support transit and active transportation while reducing carbon emissions.

Thank you.
