I am a medical cannabis caregiver. I have been a patient for 10 years. In that time I worked very hard to learn to produce clean medicine I would be happy to give to a family member. I finally became a caregiver so I could help others access their medicine with confidence. I am constantly under stress to keep my plant count to 30. It sounds like a lot, but when you are one of very few caregivers in your area, you need to be able to keep your cannabis available consistently. Increasing the plant count would enable me to keep access steady without interruption. It's good for the caregivers, the patients, and for the state. Please consider raising the plant count so we can help our patients and the State of Maine. Thank you for your time
