Windham

I am writing in support of LD 939. I feel that this bill better supports patients and small businesses and will only help to boost tax revenue and create thousands of jobs. I am a caregiver that cultivates as well as own and operate a delivery service. I work with many caregivers throughout the state with all different scales of operations. I support the idea to allow the freedom to sell the entire crop wholesale and not require caregivers to sell 25% to patients. It does not make sense to make every caregiver set up the infrastructure to handle that type of sale. If it is going to another caregiver and to the patients in the end - why does it matter? Caregivers should be able to focus on only the plant if they would like and not have to worry about making sales to patients if someone else already has the infrastructure to do so. I support being able to market to customers who would like that being done to them. It does not make sense the way these alcohol companies can market their alcohol and now even THC alcohol with dog paw prints and other animals on them but caregivers are being threatened and fined and having to go back on money spent on things that are now out of compliance.

Being able to employ family 18-20 years of age would be a very positive thing. This would help my family and business greatly and I know of many in the same boat.

I support more relaxed record keeping rules as it becomes burdensome the more things keep changing and things being added to our own processes that are new and unique to our business in this new industry.
