LD939 is a bill that makes sense. In section 3 the removal of the 75% limit of wholesale transactions is something that should definitely be implemented. To predict how much my patients will consume and have to regulate how much I can sell to a dispensary regardless of how much my patients consume does not add up. Section 1 about unlimited assistants also makes sense. This year will be my first year having an assistant. I already find it ridiculous that if my assistant can not show up to work, that I can not ask a friend to come help me. With the change of unlimited assistants, at least I could have a back up person who has gone through the background check and be able to come help. But ultimately I do not think that my greenhouse should be off limits for people in my life to enter. It is my business and my land and is considered a legalized plant. So why is it being treated like it is not.
