I support this bill cause it would change much of the routine technical rules in the program to major substantive. The department needs to create rules, like the process we are dealing with now with the new proposed rule change. Currently the rules are called routine technical. Major substantive rules would require legislative review process verses the department process. This would make the proposed rule change and the last rule change go through the legislative process which gives the community an added layer and chance to influence the rules through our elected officials.

This bill would require the department to consult with stakeholders of the community, though given the past history of the department, may not follow through.
