LD 1620

I support the passage of LD 1620. Mandatory testing is flawed and inaccurate proven to me and many others through personal experience with testing. The methods by which yeast & mold tests are conducted are flawed and unreliable. Not to mention, testing is very costly. With the cost and requirement of testing, a monopoly has been created. I am a medical (only) caregiver; however, the same consideration applies to the adult use production of cannabis. I appreciate the inclusion and unique definition of sun-grown medicine, yet again I ask for recognition and definition of "soil grown" cannabis, which can apply to indoor and outdoor growing. Soil grown and furthermore organic soil medicine production varies greatly in substance and form from synthetic production. We need this definition to explain and inform the difference between various production forms.
