LD 104

I am writing today to express my strong opposition to LD 104. As a patient who depends on access to high-quality medical cannabis, I am deeply concerned that this bill will significantly restrict my ability to obtain the medicine I need to manage my health effectively.

LD 104 would impose unnecessary limitations and barriers on caregivers and small providers who currently supply clean, affordable, and effective medicine. These caregivers play a critical role in my health care. Unlike large-scale, profit-driven operators, they take the time to understand my specific needs, provide personalized care, and offer a consistent supply of the strains and products that work best for me. Limiting or eliminating these caregivers through burdensome regulations or restrictions will directly harm patients like me.

This bill risks shifting the medical cannabis system toward a one-size-fits-all approach, where patients are forced to rely on large dispensaries that may not offer the same level of quality, affordability, or individualized care. For those of us with chronic conditions or complex needs, that is simply not acceptable.

Medical cannabis is not a luxury—it is a necessity. LD 104 threatens to put quality medicine out of reach for many patients who rely on it to function and live with dignity.

I respectfully urge you to oppose LD 104 and protect patient access to compassionate, high-quality, and personalized care.

Sincerely,
Tyler Giles
