LD 104

No - I urge you to vote NO on LD104. While they may be presented as efforts to protect public health, these bills actually threaten patient access to safe, affordable medicine and impose unnecessary burdens on small caregivers and growers who already operate under tight regulations. These are the small mom and pop shops that make Maine, Maine.

Mandatory testing requirements—especially when not scaled for small producers—will drive up costs and limit supply, making it harder for patients like me to access the medicine we rely on. Maine's caregiver system has worked for years with a strong safety record. These bills risk dismantling a community-based model in favor of more industrialized control, which does not serve patients' best interests.

Please protect patient access and the small businesses that make this program work. Vote NO on LD104 and LD1847.
