Im writing to encourage the VLA members to vote "ought not pass" today on this bill.

I personally would love to see a reasonable proposal on a testing program for Maine medical cannabis, but this isn't it. Again. Year after year we ask for common sense testing like the systems consumers and producers enjoy in other farming occupations.

This bill doesn't even address PGRs. I question weather the author even knows what banned PGRs are in farming since year after year this isn't addressed. (a PGR is a plant growth regulator, and many are associated with cancer and other nasty outcomes) There use is banned, but sadly common by unethical growers. They are a primary reason I have grown my own for nearly 3 decades.
